

Who's Watching Your Farm?

Cost-effective protection for your farm perimeter

FarmGate Monitoring
Real Peace of Mind

FarmGate Monitoring. Real Peace of Mind.

Poaching and trespassing on farms has become a frequent occurrence in recent years. There is a widespread fear of intrusions, especially in remote areas.

The FarmGate system uses **Machine Learning** to teach Artificial Intelligence powered cameras to **detect human presence**, and differentiate it from other alarm triggers such as animals. Our solution is tailor made for a variety of needs.

Our superior technology creates a 'virtual boundary' area to establish a **visual early-warning** intruder detection perimeter. Our system can be applied to Infra Red and Thermal cameras, to new and existing cameras (upon assessment), and can be calibrated to accurately **detect crawling through fence lines**.

It is ideal for farm perimeter fences lines, the front gate, and around the household.

FarmGate in Action:

Proudly South African Product

Having a locally developed product means having a well established supply chain, ready to provide service to anywhere in the country.

Machine Learning Driven

Where regular video analytics or motion sensor based technology only has pre-determined categories of detection, Machine Learning can be customised and taught over time, resulting in increased accuracy.

Solar Installation Capable.

Our system can be run off of solar power, which allows for monitoring in remote off-grid scenarios.

Human Detected.

Night time Detection.

Animal Detected.

Vehicle Detected.
