

Why Video Analytics?

Advanced Artificial Intelligence Detection

**Tried and Tested
Real Peace of Mind**

Tried and Tested. Real Peace of Mind.

What's the big deal with Video Analytics? I already have a CCTV system, what's the difference?

Video Analytics combines traditional CCTV camera monitoring with Advanced Artificial Intelligence software, that can learn and improve over time, based on pre-selected criteria. Simply put, security technology has moved on. A.I systems can accurately alert us to suspicious activity to prevent crimes from occurring, and can help cover gaps in existing systems.

Video Analytics is a step above traditional monitoring. With traditional alarm monitoring, a controller viewing an incident will only respond only after an alert has been triggered. Video Analytics on the other hand, provides a pro-active detection system, which monitors human behaviour before an incident has occurred. This casts a far wider net that can filter out input in order to catch the right targets.

This larger, smarter net seamlessly integrates with human-driven intervention strategies to allow for an accurate and highly targeted approach to security, and can result in fewer false alarms.

This service is perfect for a wide array of applications, from residential, neighbourhood watches and temperature screening through to large scale commercial uses. The scalability of the software, its ability to track busy areas in real-time, while filtering out and highlighting numerous input categories, means that Video Analytics is an ideal cost-effective security solution for any situation.

So what's different? Everything.

Cutting-edge A.I Software

Combining customisable detection settings and artificial intelligence software that learns over time, our video analytics system can result in fewer false alarms, and increased accuracy through deep-learning technology.

Compatible and Cost Effective

Our Video Analytics system is compatible with existing CCTV systems, and allows for a great, cost-effective compliment to your security.

Active vs. Passive Monitoring

Older methods of security rely on an intruder triggering a device such as a beam/outdoor passive. Video Analytics uses A.I to actively monitor a property.

Ultra-fast Alert Rate

Verifier receives an alert of an incident within seconds of the video analytics software detecting the event.

Perimeter Monitoring

Estate/Community Surveillance

Intruder Detection
