

Smart Community Monitoring

What's happening in your street?

**Tried and Tested
Real Peace of Mind**

Tried and Tested. Real Peace of Mind.

For many South Africans, we are somewhat used to the late-night patrols of neighbourhood watches, armed responses, or the police, but who else is out in your neighbourhood at night?

Not everyone has the luxury of being nestled in a quiet cul de sac, or residential estate, and access control can be a challenge if your neighbourhood is intersected by public roads.

Many people may wonder how to best monitor their area or upgrade their community watch, especially with a limited budget. Verifier's Community Monitoring solution utilises smart cameras to create cost-effective virtual boundaries in your community, and Licence Plate Recognition systems, gaining valuable, and instantaneous insight into the goings on in your neighbourhood.

Client-specific system

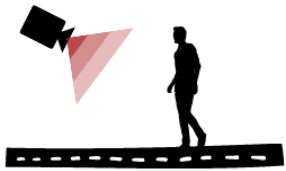

Physical Security Information Management (PSIM) Systems are tailor made to match your requirements and budget.

Effective Perimeter Monitoring

Our A.I driven 'virtual boundary' detection establishes a visual early-warning intruder detection perimeter.

Cost-effective Security Enhancement

Our system allows Integrated communities to access high-end technologies such as License Plate Recognition and A.I powered Video Analytics, at an incredibly affordable rate.

First, we receive real-time alerts from your street.

Verifier software continuously monitors alerts from your street whether from License Plate Recognition, Video analytics systems or Smart Apps.

Then, our trained operators verify the alert.

Alerts are then sent to our trained operators for verification. Any positive alerts are then managed according to a strict pre-determined protocol

Finally, we dispatch responders, and send an alert.

Once an alert has been verified, our operator will immediately dispatch responders to your street and issue a general alert via your Smart App.
